

CITYNET

LLOYD'S BROKER

# Life Sciences Insurance

Life science organisations face a variety of exposures throughout the lifecycle of their business, from research and development, to trials, to the manufacture and sale of their products. Our Life Sciences facility offers distinctive coverages that address the unique, complex and ever-evolving threats that businesses face today.

**At Citynet Insurance Brokers, we understand the different components that go into a Life Science business and as a result we know exactly the types of insurance your client may need and the best ways to get them.**

Companies operating within the fast-paced, complex and often high-risk Life Sciences industry, require bespoke coverage supported by the understanding of the industry. Knowing exactly where a company does or does not have cover can mean the difference of high sums of money in potential losses.
